Bring Your Own Device
Parent Information Night

Ms Kristen Masters
Principal – Kapunda High School
BYOD - Introduction

- We want to give your child the chance to use their own mobile technology as a learning tool.
- Increasing presence of personal technology at school already!
- Government funding for school-provided devices is unable to maintain the 1:1 ratio.
Bring Your Own Device
Parent Information Night

Answers to Common Questions

Presenters:
Craig D. Cope  (Teacher - Digital Technologies)
Jack Mickan  (ICT Support)
Q. Is BYOD new to KHS?

A. No. For almost three years we have had the provision for students to bring their own laptop or tablet to school to connect to the school network. However, the need is increasing as school computers near their ‘end of life’ and will not be replaced.
Q. What is the benefit of BYOD for my child?

A. A number of students currently bring their own device to school and find having their own device to use - wherever, whenever - exceptionally positive. They are not reliant on teachers booking sets of laptops (which are decreasing) or having to share with others in the class.
Q. Is KHS the only school going down this path?

A. Most secondary schools (public and private) are in the process of making the transition to BYOD. Many schools already have in excess of 90% of students bringing their own device.
Q. Will my child be distracted using their own device accessing things like Facebook during lessons?

A. No. Because they are connected to the school network, they will automatically use the school internet and school filtering and security.
BYOD – Questions and Answers

Q. How secure is it? Will my child have access to inappropriate content?

A. While using the schools wireless network, online content will be filtered to prevent students accessing inappropriate content. Provision of internet security and appropriate use at home will continue to be the responsibility of families. The school encourages parents to discuss expectations with their child regarding appropriate use of the device. Many parents already require their children to ‘surrender’ their mobile phones during homework and at bedtime, and a similar approach with the laptop is recommended.
BYOD – Questions and Answers

Q. Do I have to purchase special applications?

A. No. Because they are connected to the school network, they continue to access school applications in a virtual environment. This gives your child access to a range of education software that would normally be out of reach for many families. This software is also available when connected to the school from home.
BYOD – Questions and Answers

Q. How often will the laptop be used during school time and what will it be used for?

A. The devices are intended for use at school on a daily basis, although it will not replace the use of all the tools we currently use in class, such as books, pen and paper.
Q. Why is the school recommending a laptop for BYOD? Can’t my child use any device?

A. Whilst any device can technically be used to connect (including smartphones, iPads etc.), the best experience for the student will be achieved with a larger screen and physical keyboard. (Smartphones are still ideal for quickly checking class notes on Daymap and homework requirements).
Q. Why is the school ‘recommending’ a device?

A. While most devices with a screen size of 9 inches or more can be used for school, we have introduced a recommended device portal as a one stop shop for families wanting to purchase something that they can be certain will ‘do the job’.
Q. Does the school get any commission for recommending these devices?

A. The school has negotiated a competitive price for our families but we receive no commission on the devices. Our interest is only in providing an easy way for families to purchase appropriate devices for school.
Q. What are the advantages of purchasing through the BYOD recommended device portal?

A. Devices are ‘educational standard’ – suitable battery life, etc.
A three year warranty is included in the price with service organised directly through Kapunda High School.
There is also the ability to organise insurance for damage, loss or theft (if not covered through household insurance) as part of the package.
BYOD – Questions and Answers

Q. Can I get a copy of the school software to install on to my child’s laptop?

A. All software is accessed via the ‘Virtual Desktop’ and is not installed directly on the device. To be compliant with our licencing agreements software can not be made available for families to install directly on a device.
Q. What is Office 365?

A. Office 365 is the suite of Microsoft products available online for student use. A copy can also be installed locally on personal devices. The cost is free for current students as part of an agreement between DECD and Microsoft.

It includes ONE Terabyte of cloud storage.
Q. Do I need to take out my own insurance?

A. The purchase price via the Portal includes:

1. A **3 Year Next Business Day Onsite Service**. This warranty covers any hardware related issues that are the result of manufacturing or workmanship.

2. An **OPTIONAL**
   - **3 Years Accidental Damage for Theft & Loss**
     + $202 to $237 depending on model ($50 Excess)
   - **3 Years Accidental Damage Only**
     + $166.00 to $190.00 depending on model ($50 Excess)

Note: Accidental Damage covers a limited number of accidental damage cases (such as broken screens) that are not the result of manufacturing or workmanship. Whilst there is a $50 excess charge for this, the value is exceptional, should it be required.

*It is recommended that you speak to your insurance company about this if you do not choose one of the above options.*
BYOD – Questions and Answers

Q. Where will the laptop be stored during the school day?

A. When the device is not in use, it is the student’s responsibility to keep their laptops securely locked in their lockers. Students should keep their laptops in a safe and secure place, as determined by their parents, while at home.
BYOD – Questions and Answers

Q. Can students install their own software, or will this be restricted/disabled?

A. Yes, students will be able to install their own software, but this software is not available when using the school's Virtual Desktop. All software should be legally purchased. If there are any problems with the operation of the computer as a result of software that has been personally installed, the computer may need to be reimaged to its original state and any student installed software may be lost. Students are required to back up all files regularly in case the laptop needs reimaging.
Q. Do I need Antivirus software

A. Yes – this is strongly recommended. It is available as an option via the portal. The school is not able to assist students with virus removal, so prevention is the best cure! Virus removal is not covered under warranty. If virus removal is required, you will need to use a ‘fee for service’ from a computer support person/company.
BYOD – Questions and Answers

Q. What if the laptop runs out of battery charge?

A. The recommended laptops have a battery life that should be ample for normal daily class use. Laptops must be brought to school each day, fully charged. Students will need to have chargers “tagged and tested” to be permitted to be used at school. There are only a limited number of power stations that can be used for charging.
BYOD – Questions and Answers

Q. What if my child leaves their laptop at home?

A. As with any tool or textbook, if students leave their laptop at home they are responsible for getting the work completed as if they had their laptop present. Extra ‘school’ laptops for student use may not be available.
Q. Do I need wireless internet (WiFi) at home?

A. The laptop is a wireless device that must be connected to the internet to access the Virtual Desktop. We have wireless access for all students across the campus at KHS. If you already have wireless internet at home, the laptop will easily connect to this.
BYOD – Questions and Answers

Q. What sort of internet plan do I need at home?

A. The virtual desktop does not use a large amount of data (only keyboard, mouse and screen changes are transmitted over the internet). No personal internet data is used when used at school. However, it is very important to check what type of internet plan you are on. Some plans charge you if you go over your monthly download allowance, others give unlimited downloads and slow your connection if you go over your monthly limit. Unlimited plans are the safest and best value.
BYOD – Questions and Answers

Q. Can other members of the family use the laptop?

A. We advise against any other members of your family using your child’s laptop. We believe that ownership of the device is an integral aspect of any BYOD program. As part of their growing responsibility as a ‘digital citizen’, it is important that each student is aware of the fact that they are responsible for the device and for the contents of that device.
BYOD – Questions and Answers

Q. Will all textbooks and novels be available electronically on the laptop?

A. Our ultimate goal is that the laptop will replace the need for students to carry textbooks.

However, with textbook publishers still working hard to catch up with technology, in 2016, some textbooks will be available on the laptop, while others will still be in the traditional textbook form.
Q. Will the laptop come with a mouse?

A. No, the laptop will be equipped with a 'touch pad' which should be sufficient. If your child prefers to use a mouse, you will need to purchase one for their use. These are available at the time of purchase from the Portal, but can also be purchased at many different locations.
