Installing the VMware Horizon View Client
To use the KHS Virtual Desktop you must first install the client software on your device. If you already have the client installed go to page 3.

1. Find and install the correct version for Windows*, Mac, iOS or Android from the following website. https://www.vmware.com/go/viewclients
   *For Windows users select the 32-bit or 64-bit client version depending on your version of windows. If you do not know which version of windows you are using – find out here: http://support.microsoft.com/kb/827218

2. Run the installer (the following images show a standard install on a windows operating system)

The Default View Connection Server for Kapunda High School is: vdi.kapundahs.sa.edu.au

Run the program

Click Next

Click Next

Accept the terms – click Next

Type in: vdi.kapundahs.sa.edu.au – click Next
Untick Show in connection dialog – click Next

Click Next

Click Install

Click Finish

Click Yes to Restart Computer

You should now find a new VMware Horizon View Client icon on your Desktop.

For assistance installing the VMware Horizon client, ask for help at the school IT HelpDesk.
Connecting to and using the VMware Horizon View Client

*First ensure your device is connected to the Internet at home or the VDIWIRELESS network at school!

1. Open the VMware Horizon View Client app from your computer or device.
   If the Server field is blank type: vdi.kapundahs.sa.edu.au

   ![VMware Horizon View Client](image1)
   **Click Connect**

   ![VMware Horizon View Client](image2)
   **Enter your School computer username and password**

   ![VMware Horizon View Client](image3)
   **Select a Virtual Desktop to connect to.**

   These desktops will change over time as software is installed or updated. (For this reason remember to always save work in your personal network folder.)

   ![Virtual Desktop](image4)
   **The Virtual Desktop will now load**

   For Assistance in using the Virtual Desktop app see the Help Menu from within the app – or ask for help at the school IT Office.
